Fundamentals of Weather

This course covers many aspects of the formation and behavior of the weather around us. Meteorology (the study of weather) is quite technical in nature. In contrast, *Fundamentals of Weather* is presented in a straightforward manner eliminating much of the jargon.

The study of weather is both fascinating and satisfying. The skills you will develop from this course will serve you for a lifetime. With practice, it will become possible for you to make short term forecasts. Challenge the professionals as to who better predicts the weather in your local area.

With *Fundamentals of Weather* you will forecast the weather beyond "red sky at night."

Topics

- » How the Sun Causes Weather
- » What Causes the Wind To Blow?
- » Water in the Atmosphere
- » Clouds—The Signposts of the Skies
- » Fronts and Frontal Weather
- » Thunderstorms and Tornadoes
